

Cyber Attack Trends for 2023

Attacks on 5G Devices

Hackers are looking to take advantage of coding vulnerabilities with the 5G hardware used for routers, mobile devices & PC's.

One-Time Password Bypass

OTP is designed to get past MFA. Some ways this is done include:

- Reusing a token
- Sharing unused tokens
- Leaked token
- Password reset function

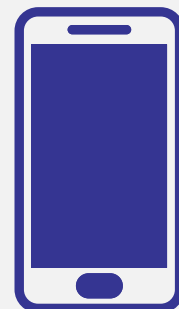

Attacks Surrounding World Events

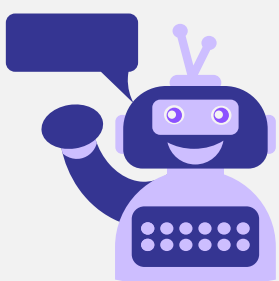

People need to be especially mindful of phishing scams surrounding global crisis events

Smishing & Mobile Device Attacks

Mobile devices go with us everywhere. Look for more mobile device-based attacks, including SMS-based phishing/smishing.

Elevated Phishing Using AI & Machine Learning

Criminal groups elevate today's phishing using AI & machine learning. Not only will it look identical to a real brand's email, but it will also come personalized.
